

THE CROSS SECTOR PROJECT

Mapping Australian Systems of Income Support for People with Health-Related Work Incapacity

January 2018

A very large number of Australians of working age experience periods of temporary or permanent work incapacity due to ill health, disability or injury. The costs of providing income support to these people are substantial. Income support is dispersed across many commonwealth, state, territory and private organisations through ten major systems. Services to assist health and work outcomes may be funded through these systems, through personal resources or through other systems (e.g., Medicare, Private Health Insurance, National Disability Insurance Scheme). While we have a limited understanding of the movement of people between the support systems, there are multiple short-term opportunities to improve knowledge in this area. There are also numerous opportunities to improve work and health outcomes in this population. Many of these require cross-sector collaboration.

786,000

expendi786,000 people who were unable to work due to ill health, injury or disability received income support from a commonwealth, state, territory or private source.

6.5M

An additional 6.5 million people accessed employer provided leave entitlements for short periods of work incapacity.

\$37.2 B

A total of \$37.2 billion was spent on income support for these people during the year.

SCOPE OF INCOME SUPPORT SYSTEMS

LARGEST

SMALLEST

SYSTEM SERVICES AND FEATURES

- 6** Systems fund return to work services
- 6** Systems fund job finding / employment services
- 5** Systems fund healthcare and treatment
- 4** Systems fund provision of functional supports
- Case management was the only service provided across all systems**

COMMON MEDICAL CONDITIONS

Musculoskeletal and mental health conditions are common.

Many people enter these systems with conditions ranging from mild temporary illness to serious acquired disability.

MOVEMENT BETWEEN SYSTEMS

There is very little data on movement of people between systems. Interviews with 25 experts revealed a small number of major pathways for people with long periods of work incapacity.

SYSTEM DATA

The systems are data rich. However the data landscape is highly fragmented and siloed. Half of the systems have centralised databases, there are few common data standards and no formal data linkage.

IDENTIFIED OPPORTUNITIES TO IMPROVE WORK AND HEALTH

- Information and data sharing
- Earlier intervention
- Aligning service models
- Engaging and influencing employers
- Product and benefit design
- Better system transitions
- Macro level policy reform

SERVICES AND FEATURES	Return To Work	Healthcare / Treatment	Employment	Functional Supports	Case Management
					
	Support for returning to the same job or workplace.	Medical care provided by a healthcare practitioner.	Support for finding a new job or new employer.	Aids and equipment to support daily living.	Coordination of services, supports and funding.
